

## Intermediate Heat Transfer (Hardback)

By Ahmad Fakheri

Taylor Francis Inc, United States, 2013. Hardback. Book Condition: New. New.. 257 x 180 mm. Language: English . Brand New Book. Written for an advanced undergraduate or first-year graduate course, Intermediate Heat Transfer starts with the basics, and puts emphasis on formulating problems, obtaining solutions, and analyzing results using analytical, and numerical methods with the aid of spreadsheets and CFD software. The text employs nondimensionalization as a tool for simplifying the governing equations, developing additional insights into the physics of the problems, identifying the relevant parameters, and arriving at general solutions. It provides comprehensive coverage of the topics and develops the skills for solving heat transfer problems using numerical methods with the aid of spreadsheets and computational fluid mechanics software. \* Presents coverage of convective, conductive, and radiative heat transfer at the graduate level \* Provides a balance of analytical and numerical approaches to advanced heat transfer \* Stresses nondimensionalization throughout the book as a tool for simplifying the governing equations The author presents detailed numerical solutions to many advanced problems using spreadsheets, although the methods presented for obtaining solutions can be can also be implemented using equation solvers and computing environments, or direct programming using languages such as Fortran...

### Reviews

*The most effective publication i ever study. I am quite late in start reading this one, but better then never. You wont sense monotony at whenever you want of your time (that's what catalogs are for concerning in the event you ask me).*  
 -- Prof. Erin Larson I

*This publication is great. It really is packed with knowledge and wisdom Your daily life period will probably be transform when you complete reading this article book.*  
 -- Wilford Metz
