## THE GUIDE TO THE INDIAN CIVIL SERVICE CONTAINING DIRECTIONS FOR CANDIDATES, STANDARDS OF QUALIFICATION, SALARIES AND SPECIMENS OF EXAMINATION PAPERS

DOWNLOAD

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 52 pages. Dimensions: 9.6in. x 7.3in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1870 Excerpt: . . . If a particle describe a curvilinear path about a centre  $I$  of force, prove that the areas described by the radius vector are proportional to the times. The orbit of a comet is an ellipse which intersects the earths orbit (supposed circular) at the extremities of its minor axis. Find the period of the comet in days. If  $e$  be the eccentricity, find how long the comet will remain within the earths orbit. 6. Explain what is meant by centrifugal force, and show that it is properly measured by, where  $v$  is the velocity,  $m$  the mass of a particle, and  $p$  the radius of curvature of its path. A small heavy ring can slide on a smooth vertical circular wire, and the circle is made to turn about a vertical diameter with a uniform angular velocity so as to make  $n$  complete revolutions in a second. Find the position which the ring tends to take on the wire and the time of a small oscillation. 7. Show how to find the centre of pressure of any area immersed in a homogeneous fluid under the action of gravity. Apply your method to the case of a triangle with one side in the surface. 8. Define the metacentre, and point out how its position determines the stability or instability of a floating body. A thin heavy hemispherical shell floats in water; determine the ratio in which the stability is altered by attaching a weight equal to that...
